

CAMPUS FACILITY MAINTENANCE MANAGEMENT SYSTEM

A Database-Driven Web Application for
Managing Campus Maintenance Requests

DBMS Course
Project

Pranav Arjun Nikam • Purva • Sharanya • Saathvik
Dr. Kiran Mayee Adavala

THE PROBLEM

Maintenance requests are difficult to manage when information is scattered across people, messages and manual records.

01

Requests are difficult to track

02

Technician assignment is not centralized

03

Work and material records are scattered

04

Reporting becomes difficult

ONE SYSTEM. ONE WORKFLOW.

A centralized database-driven platform for the complete maintenance lifecycle.

■ Centralized Data	■ Real-Time Status	■ Technician Management	■ Structured Reporting

Feedback

TESTED END TO END

From request creation to closure, the complete workflow was tested with the connected MySQL database.

- ✓ Database Connection
- ✓ Request Creation
- ✓ Request Listing
- ✓ Technician Assignment
- ✓ Status Update
- ✓ Work Log
- ✓ Material Usage
- ✓ Request Closure
- ✓ Feedback
- ✓ Reports

FROM COMPLAINT TO COMPLETION

REPORT

ASSIGN

REPAIR

TRACK

CLOSE

IMPROVE

Our system transforms campus maintenance
into a structured, trackable and database-driven workflow.
